Entire Lifecycle Covered

The Best of Both Worlds: Pro-Dev React + Power Platform

Power Apps Code Apps let you write real React + TypeScript applications that run on Power Platform infrastructure — with enterprise auth, Dataverse, 1000+ connectors, and managed ALM built in. No more choosing between developer freedom and platform governance.

Real React, Real TypeScript

Write standard React 18 with Fluent UI v9, TanStack Query, React Router, and Vite. Your existing frontend skills transfer directly. No proprietary low-code canvas to learn.

Enterprise Auth — For Free

Entra ID authentication is automatic. No OAuth flows to build, no token management, no login screens. Every user is authenticated before your first line of code runs.

1000+ Connectors, Zero fetch()

Dataverse, SQL, SharePoint, Teams, Office 365, custom APIs — all accessed through generated TypeScript SDKs. The Power Platform sandbox handles auth and DLP enforcement for every call.
